Medication			Discrepancies
Name	Dose	Frequency	Outline any discrepancies/ issues and what should be done
Metformin modified release tablets	2g	Once in the evening	None
Dapagliflozin tablets	10mg	Once in the morning	None
Ramipril tablets	10mg	Once in the morning	None
Amlodipine tablets	10mg	Once in the morning	None

**NOT FOR CLINICAL USE - PROPERTY OF OSCE TOOLBOX**

Atorvastatin tablets	20mg	Once in the evening	The patient is not actually taking these. The GP should review due to patient not tolerating side effects.
Sertraline tablets	100mg	Once daily	The patient is not actually taking these. Antidepressants should not be stopped by the patient themselves. It is recommended for 6 months after the symptoms have resolved.
Ibuprofen tablets	200mg	Once or twice a day	This is not on the repeat medication list, which is concerning as the GP may not be aware the patient is taking this. The patient should be further investigated for headaches and joint pain. The patient should be taking a PPI with regular NSAID use. GP to review.
